

Power Plant Systems

Complete Energy Solutions

*"Powering Tomorrow with Smart Hydropower Solutions
for Predictive Maintenance and Dynamic Operations"*

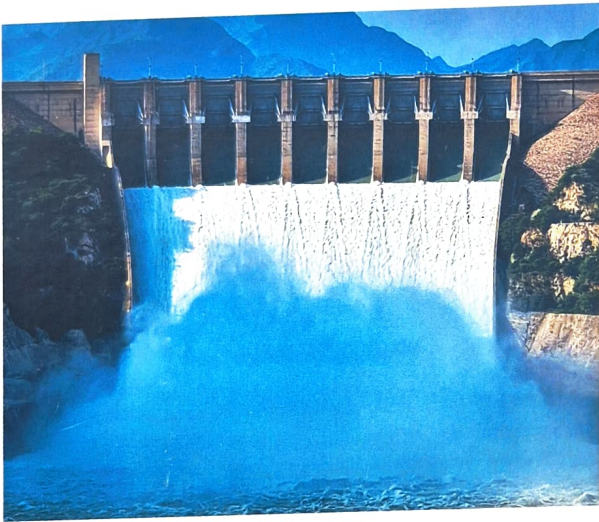

SOLUTION FOR HYDRO ELECTRIC TURBINES

"UNWINDING THE FORCES OF NATURE"

About Texron

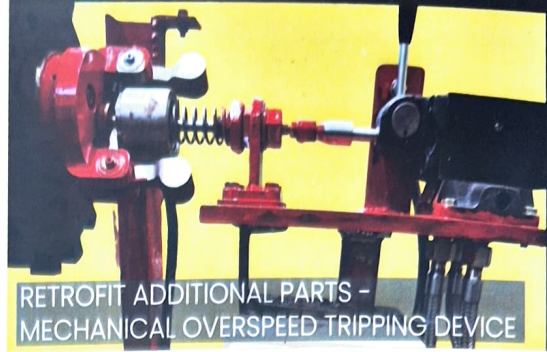

Texron is a Professionally managed by a team of young aspiring engineers in power business committed to provide a wide range of products and services to the customers for their power plant needs.

The company is focussed on quality committed delivery and cost effective solutions which are the drivers for good reach and acceptance in a short time. Texron philosophy stands for the customer focused approach in providing the complete service solutions.

Our Supports for Hydro Turbines

- + Engineering & manufacturing of Governing Hydraulic system (Valve Table Assembly).
- + Panels for the Governor and Turbo Supervisory system.
- + Mechanical accessories- Speed sensing wheel, over speed trip device.
- + Enhancing Automation & protection through speed, vibration & pressure sensors, level, temperature and moisture measurements.
- + Handling spares for Hydraulic valves, instruments and mechanical components.
- + Overhauling services for turbine and hydraulic systems.
- + Revamping and Automation of MIV and Silt gates.
- + Services offered include AMC for the valve table assembly and hydraulic systems.

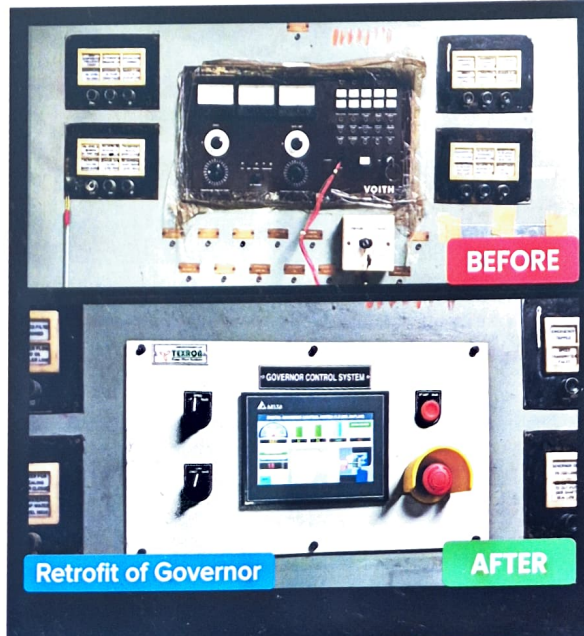

RETROFIT ADDITIONAL PARTS -
MECHANICAL OVERSPEED TRIPPING DEVICE

Retrofit of Governing Hydraulic System

The most optimum retrofit of a governing hydraulic system includes replacing the hydro-mechanical cabinet (HMC) with a modern valve table assembly (VTA). The proportional valve, directional valves, and logic elements are mounted in the modular block, making them compact and convenient for operation and maintenance. Additional filtration for pilot oil and measuring instruments is integrated into the VTA. Critical components such as the oil tank, pumps, pressure vessels, and servo motors are retained or upgraded as necessary.

Additional Parts in Retrofit

- + Teeth wheel for speed sensing.
- + Speed sensors.
- + Hydro mechanical Overspeed trip device.

Retrofit of Governor

AFTER

"Elevate Your Operations with Streamlined Interfaces and High-Value Solutions"

Retrofit Solution for Governing System

Our comprehensive solution covers Kaplan, Francis and Pelton turbines, featuring modern governing systems with advanced software & hardware packages. We integrate proportional valves, logic elements, and directional valves in valve table assembly.

Electronic position feedback and instruments ensure accurate control, along with electronic governor control and turbo supervisory panel. Our services include complete integration and commissioning for seamless operation.

Technical Features of Control System

PLC based Governor Control System.

Plant Auxiliary control system

Turbo Supervisory Control System.

The system integrates standalone control with SCADA, ensuring reliability with simplex and redundant hardware. It manages DC and proportional valve control, interfaces with third-party systems and supports versatile load, position and level mode controls for diverse applications.

The system offers fully automatic sequence control, smoothly switching between main and standby pumps via condition monitoring. It efficiently oversees turbine auxiliary systems for peak performance, facilitating automatic synchronization and loading for streamlined operation.

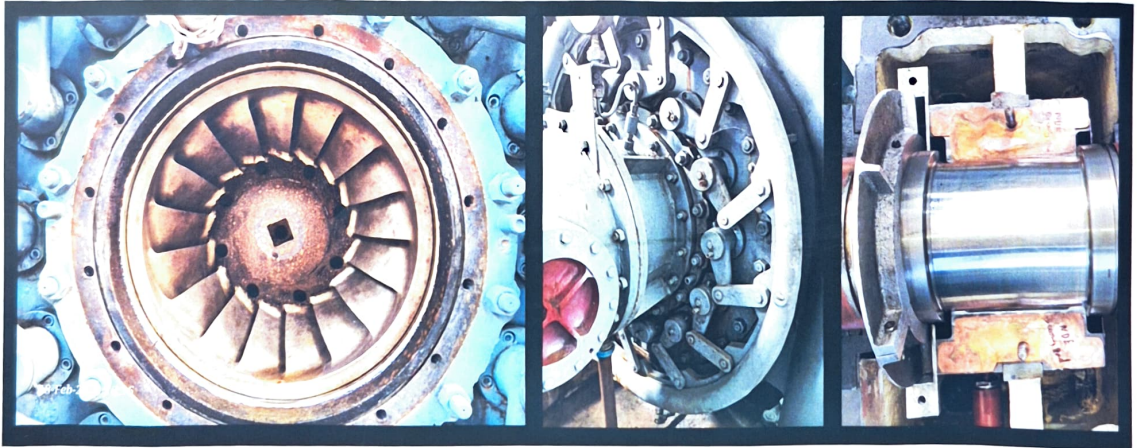

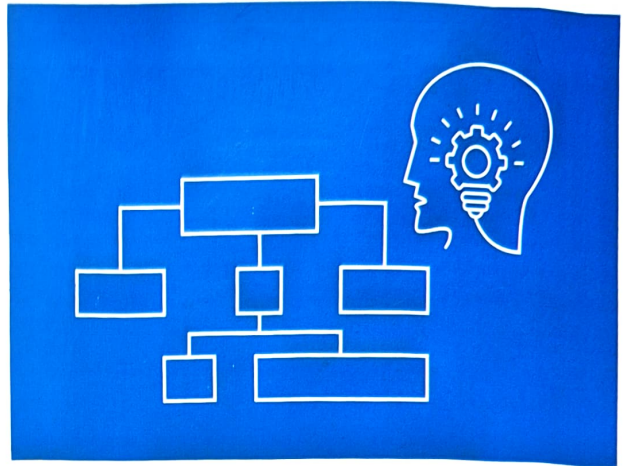

The system ensures safety and reliability with electronic overspeed protection, vibration and bearing temperature monitoring and real-time brake control system for optimizing performance.

Solution Flow Chart

As Our Strength in Governor Control System

- + Process and Application review through Technical survey.
- + Determine Control hardware and software preference as per requirements.
- + Preliminary engineering: Overview, System Architecture, IO counts, SCADA, OS, ES & HMI.
- + Selection of PLC components & detailed engineering.
- + Engineering design and manufacturing of Governor control panel.
- + Application software development – Logics and SCADA..
- + Installation & Commissioning.
